

CITS4230 – Internet Technologies
Project Stage1: A Simple Survey Question

Group F Members: Dara So
 Arun Alex
 Karma Tshering
 Mulky Gautam Kamath

We have a total of 10 pages and 2 Dynamic Templates for the website.

Main Web Pages are:

1. Home
2. Plans and Pricing
3. Sample Survey
4. FAQ
5. Contact Us
6. Register
7. Log In
8. Help
9. Privacy
10. Sitemap

Dynamic Templates are:

1. Survey_Guru_template (for creating additional if we need later on)
2. Surveyguru_Sample_Survey_template (for creating sample survey page)

Styles Applied:

Dynamic Template: We have adopted dynamic templates with defined Editable Area. So that if we need to add more pages to the site later on, this can help us to maintain and ensure that all pages within our site are in the same structure format.

CSS: We have used CSS2.1 for structuring all the pages in our website so that there is a consistent feel throughout the website. There are also some separate CSS style that applied to a particular page for contents styling.

Javascript: Forms validation are done by JavaScript at client side for ContactUs page, Registration page and the LoginSurveyGuru page. We have modified and used the free Javascript (slider.js) for Image Slider feature in our Home page, and the source is referenced below.

At the Footer section, we have links to Facebook and Twitter. They are just a dummy links at this stage.

All pages have been passed the validation of W3C XHTML 1.1 standard. However, the link to the validation result is not working as we haven't got URL to our site at this stage.

Browser Compatibility: We have tested on Firefox, IE, Safari and Opera. The only issue we came across is Opera doesn't support the image as background. Our solution is adding multiple attributes in CSS file for every items that we have used image as background. Therefore, the presentation of our site is slightly different when viewing in Opera.
